

Kiilto® ROBO

A RELIABLE, COST-EFFICIENT SOLUTION FROM FINLAND

Kiilto Robo products are suitable for cleaning all leading brands of milking robots.

Milking robots are a considerable investment for dairy farms, which makes their reliable operation one of the most critical requirements for production. The product range has been developed and tested in cooperation with farms where milking robots are used and it meets current requirements for robotic milking.

Kiilto Robo products work normally within the 50–90°C temperature range. The effectiveness of detergents is affected by the detergent chemicals, temperature, mechanical action and time. The effectiveness improves when temperature is higher. The package provides information on the contents and correct dosage of the detergent (in compliance with the requirements of the machinery manufacturers).

Safety, cleanliness, taste and quality control covering every production phase from the field to the end-customer's dinner table are all key components to producing high-quality food products. Good hygiene is important in primary food production as the poor hygiene of raw materials cannot be corrected at any later stage in the food supply chain.

Kiilto products for primary food production are conventional, reliable detergents and cleaning agents for mechanical washing, disinfecting, surface cleaning and animal care. The products are developed and produced in Finland responsibly and safely, with care for the environment.

F 2 ROBO E

A strong alkaline detergent for the general cleaning of milking robots (including piping, tanks and mechanical components). Non-foaming.

Package sizes: 20 l, 200 l

FOR ALKALINE CLEANING

F 3 ROBO KE

An alkaline detergent containing chlorine for the general cleaning of milking robots (including piping, tanks and mechanical components). Non-foaming. Prevents milkstone build-up.

Package sizes: 20 l, 60 l, 200 l

FOR ALKALINE CLEANING

F 4 ROBO H

A strong acidic detergent for general cleaning of milking robots with soft or hard water. Removes deposits and build-ups effectively. Non-foaming.

Package sizes: 20 l, 60 l, 200 l

FOR ACIDIC CLEANING

FOR DISINFECTING BRUSHES

F 5 ROBO D

A fast-acting disinfectant for milking robots' brushes, piping, tanks, equipment and surfaces. Kills bacteria already in temperatures between 5 and 20 °C.

Package sizes: 20 l, 200 l

F 6 ROBO V

Ready-to-use spray or dip for teat care. Disinfects and softens the skin and protects the teat canal. Contains glycerol for skin care.

Package sizes: 20 l, 60 l, 200 l

TEAT DIP
